- **Post Builder & Post Configurator**
- **Post Processor levels**
- **License**
- **Roadmap**
- **Post Configurator UI and Top Features**
- **Documentation**

## Concept: What is the Post Configurator?

### What is Post Configurator?

- New easy-to-use and integrated development tool for Post Processors within NX CAM
- Promote Re-use rather than Re-write
- Layer concept instead of monolithic files
- Separated core functionality from customization
- Based on the same underlying MOM architecture
- Built-in protection capability for Post Processors
- OOTB supported controllers (NX12.0.2)
  - Sinumerik 828D/ Sinumerik 840D
  - Heidenhain iTNC530/ TNC640
  - Fanuc Series
  - Okuma OSP Mill/ Turn/ Millturn

## Concept Layers

- Post Processor is more than one monolithic file now, it is split up in **layers**
- Multiple layers with different functionality, not every layer is always required
- A **layer**...
  - ... can add new functionality.
  - ... can overwrite existing functionality.
  - ... can be Tcl code.
  - ... can be encrypted.
  - ... can be protected.

## Post Configurator & Post Builder

### Future of Post Builder and Post Configurator

### What is the future of Post Builder?

- All TCL posts (incl. posts created using Post Builder) will continue to run and be supported, no plans to retire TCL, MOM, MOM events support or the underlying architecture
- Post Builder continues to be fully supported, maintained and enhanced, with bug fixes and new features as it has been until now
- All OOTB machines are migrated to a Post Configurator based post
- With NX1847 most of OOTB machine tools only contains Post Configurator based posts

### Long term:

- Help existing customers to transition to the use of Post Configurator based posts
- Evaluate if/when it will be possible to retire Post Builder
- Work with customers and partners to formulate a clear strategy which is realistic

## Post Configurator & Post Builder

### Migration of Post Builder posts

### Is it possible to migrate old post to the new platform?

- Post Configurator post are completely differently structured than Post Builder posts
- Post Builder *cannot* open Post Configurator posts
- Post Configurator *cannot* open Post Builder posts
- There is no automatic migration path or tool currently available
- Due to the same underlying interface with NX (MOM events and MOM variables) a lot of the PB source could be reused for Post Configurator

### Should the post be migrated manually?

- If a post works fine currently, we do not recommend migrating at this time

## Post Configurator & Post Builder

### For new post processors

### Should Post Configurator be used for new posts?

- For new machines we recommend using Post Configurator
- Siemens PL would offer to support and help in this transition

### What skills will developers need to create a new authoring environment? Or maintain their posts going forward?

- The same requirements as for Post Builder as underlying architecture (MOM events and MOM variables) is the same :
  1. Tcl knowledge
  2. MOM/MOM event knowledge
  3. Post Configurator knowledge

## Build up a Post processor library for your market:

- Using Masterpost concept
- Create new controllers
- Create specialized functionality for reuse which was requested by customers

## Users:

- Service/ Development

## Value:

- One time efforts will reduce costs for future
- Sharing knowledge in the team/ Standardization of coding

Costs

## Production ready post processor:

- Proved with acceptance part/ customer part on real machine tool
- Tcl customization low...high, depends on customer request
- Ideally full machine tool kit

## Users:

- Post processor/ MTK service

## Value:

- Bring back modifications to standard libraries
- next request will result in less modifications

Quality

Customer

Speed

## Demo/ Easy machine tools:

- Create a postprocessor with kinematic models or kinematic layer
- Fanuc based postprocessors can be used for a lot of controllers (MACH3, Fanuc series, Haas....)
- Small adjustments for a first good output

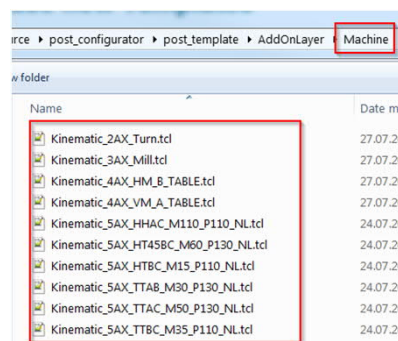

## Users:

- Presales/ Service/ Demo NX CAM

## Value:

- no/ small costs and shows that we can deliver each kind of postprocessor

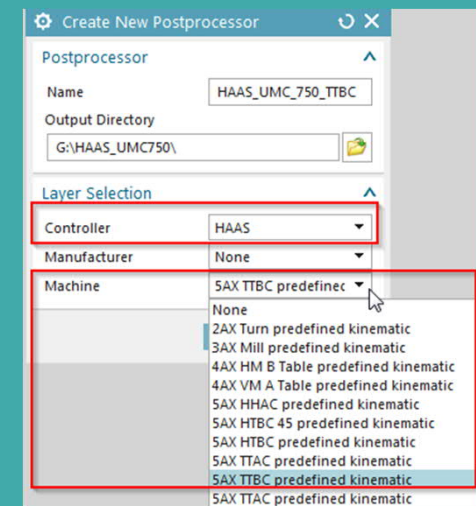

# Reuse new Templates

With Post Configurator it's possible to add/ modify/ create new Templates which will be selectable during Postprocessor creation

Best practice is to keep origin post\_template folder as a backup or locate the customized environment on a network server

The post registry contains the items which Will be shown in the Create postprocessor Dialog

## Available Post Configurator Licenses

### Basic

Free

- End Customer & CAM User
- Free for all users and included in NX CAM
- Execute new post processors

### Advanced

NX31439

- Post Developer
- Included for all Post Builder users
- Execute new post processors
- Create new post processor
- Change settings through the UI

### Full

NX 31440

- OEM, Service, Partners, Post Developer
- Execute new post processors
- Create new post processor
- Change settings through the UI
- Customization using Tcl
- Protect and Encrypt

## Bundle/License Distribution

### New customers:

- Post Configurator *Advanced* is included in the following bundles:
  - **NX11430**      NX CAM Foundation
  - **NX12440**      NX CAD/CAM Turning Foundation
  - **NX12445**      NX CAD/CAM 2.5 Axis Milling Foundation
  - **NX12450**      NX CAD/CAM 3 Axis Milling Foundation
  - **NX12460**      Mach 2 CAM-only 5 Axis Machining
  - **NX13430**      NX Total Machining
  - **NX13440**      NX Advanced 5 Axis Machining

### Existing customers:

All PostBuilder users will get Post Configurator Advanced

# Post Configurator Roadmap

**NX11.0.2**  
05.07.2017

- **Additional controller**
  - Okuma Controller (Prod)
- **New features**
  - Editor for DEF files
- **Enhancements**
  - Stabilization
- **Updated libraries**
  - Version: 4.2.2

**NX12.0.1**  
20.02.2018

- **New features**
  - Editor for UDE files
  - New Pretreatment (Prev)
  - Layer Viewer
  - Performance Improvements
- **Enhancements**
  - Stabilization
  - Multi-Channel support (Prev)
  - Multi-Function support (Prev)
- **Updated libraries**
  - Version: 4.3.2

**NX12.0.2**  
17.07.2018

- **Additional controller**
  - Heidenhain 640 (Prev)
- **New features**
  - Inspect Tool
  - Progress Indicator
  - Enhanced 3axis mode
- **Enhancements**
  - Tcl8.6 Upgrade
  - Multi-Channel support (Prod)
  - Multi-Function support (Prod)
  - Stabilization
- **Updated libraries**
  - Version: 4.4.4

**NX1847**  
22.01.2019

- **New features**
  - Enhanced Inspect Tool
  - TBC Encryption
  - New Pretreatment (Prev)
- **Enhancements**
  - Performance Improvements
  - Full Turning support
  - Full MillTurn support
  - Stabilization
- **Updated libraries**
  - Version: 4.5

**NX1872**  
(as planned)  
25.06.2019

- **New features**
  - Unencrypted Template Post
  - Inspect Tool connected to Def editor
  - UI Bitmap Support
  - UI Unit handling
- **Enhancements**
  - additive enhancements
  - Post processing non consecutive operations
- **Updated libraries**
  - Version: 4.7.1

**NX1899**

- **New features**
  - Inter property logic
  - Layer Manager UI
  - Post Hub connector
  - Update mechanism for post processors
- **Enhancements**
  - Interoperation path
  - NXOpen support

# Where do I find the Post Configurator App?

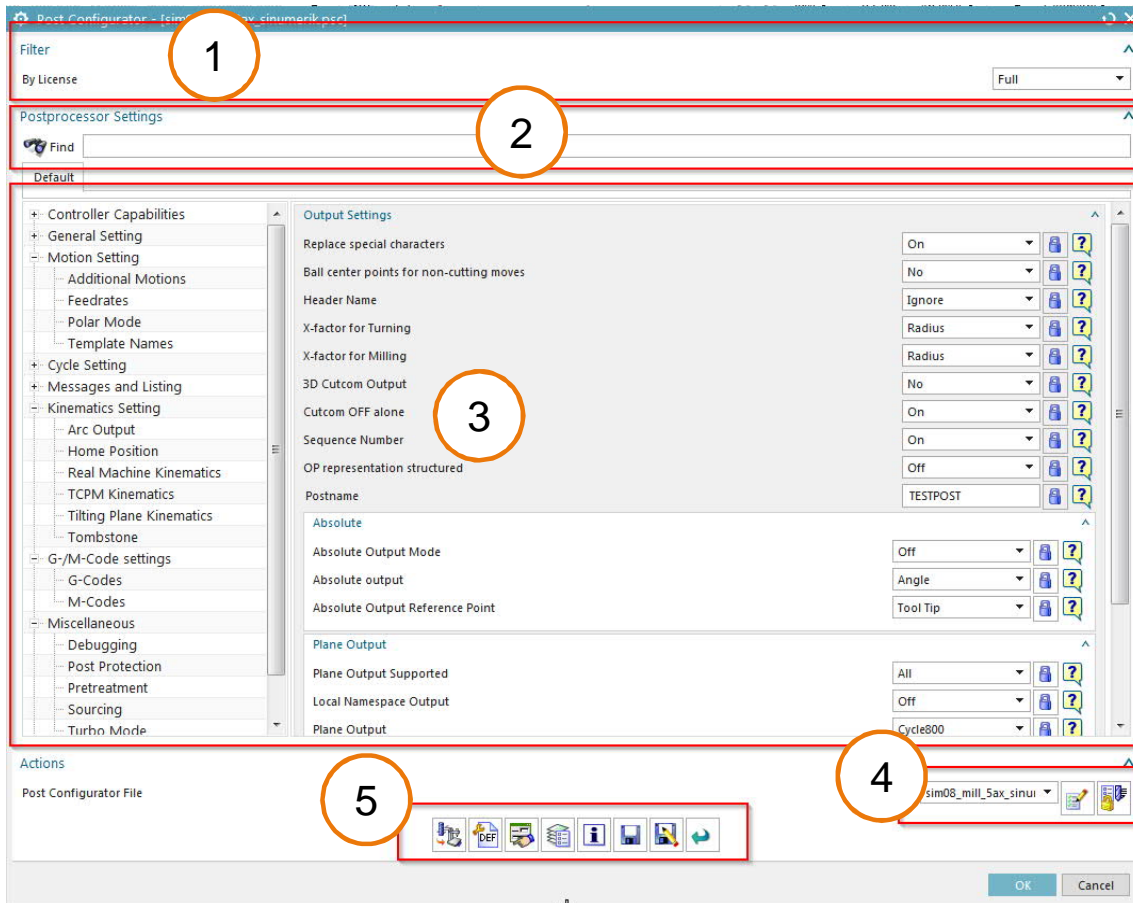

**SIEMENS**  
*Ingenuity for life*

1. Start from classic menu
2. Start from ribbon bar with CAM advanced Role (Tools group)
3. Didn't find it? Use the command search

# Overview User Interface

1. Filter by license for developers (Customer default)
2. Integrated search for properties
3. Properties settings to control the NC output
4. Integrated Tcl-editor and Encryption
5. Actions:
  - Temporary post processing
  - DEF-editor
  - UDE-editor
  - Layer Manager
  - Changelog
  - Save/ SaveAs
  - Reset

# Top Feature: Editor for DEF files Overview

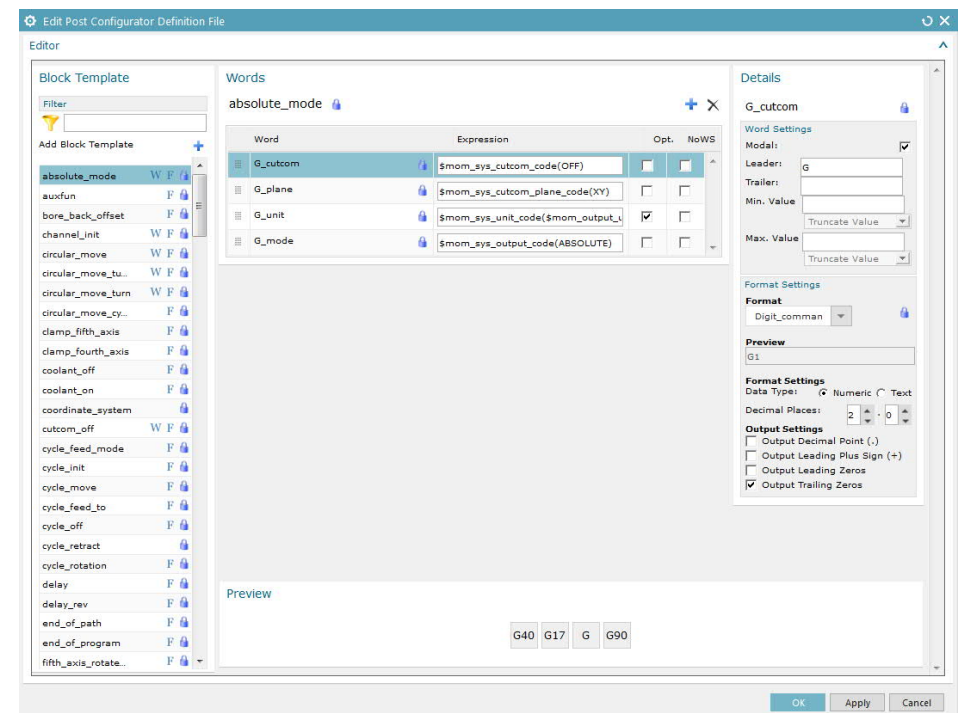

## Capabilities

- Easily add, remove or modify DEF elements such as templates, blocks, words, formats, etc. through an integrated UI
- List all available DEF elements from layers
- Fully integrated in Post Configurator, no need to edit files by hand
- Auto complete functionality

## Customer Benefits

- Easy and **integrated editor for DEF elements**
- Saves time extending the post processor events.

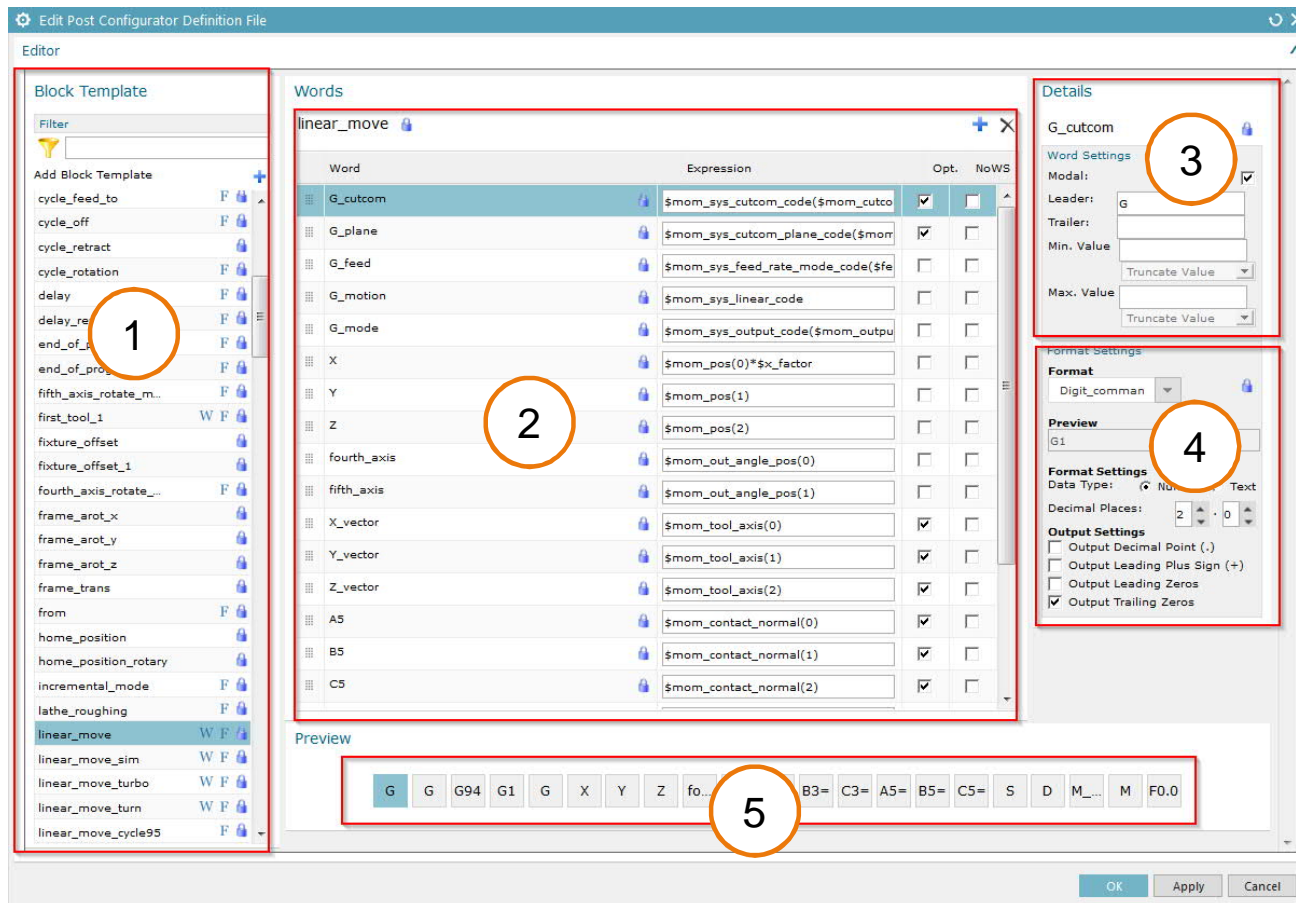

**SIEMENS**  
*Ingenuity for life*

# Top Feature: Editor for DEF files

## Overview Details

**SIEMENS**  
Ingenuity for life

1. List of defined Blocktemplates and Filter settings
2. Details from selected Blocktemplate
3. Word Details, e.g. set Leader, Trailer
4. Add/ modify/ remove Format settings for selected Word
5. Preview of Blocktemplate

# Top Feature: Editor for UDE files

## Overview

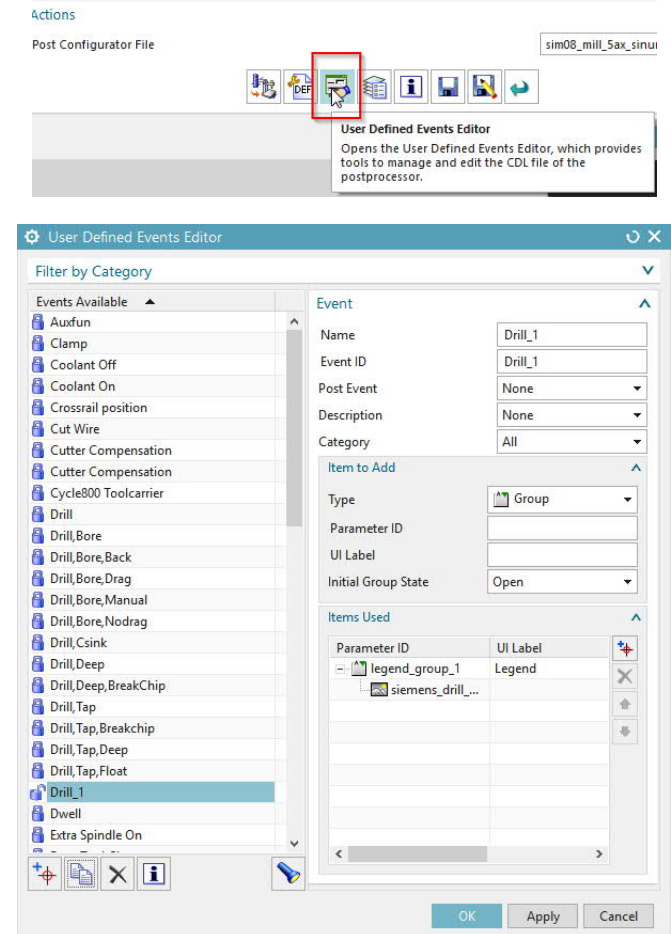

### Capabilities

- Easily add, remove or modify UDE through an integrated UI
- List all available UDE elements from layers
- Preview new user interface of custom event
- List available variables and prototype Tcl handler
- Fully integrated in Post Configurator, no need to edit files by hand

### Customer Benefits

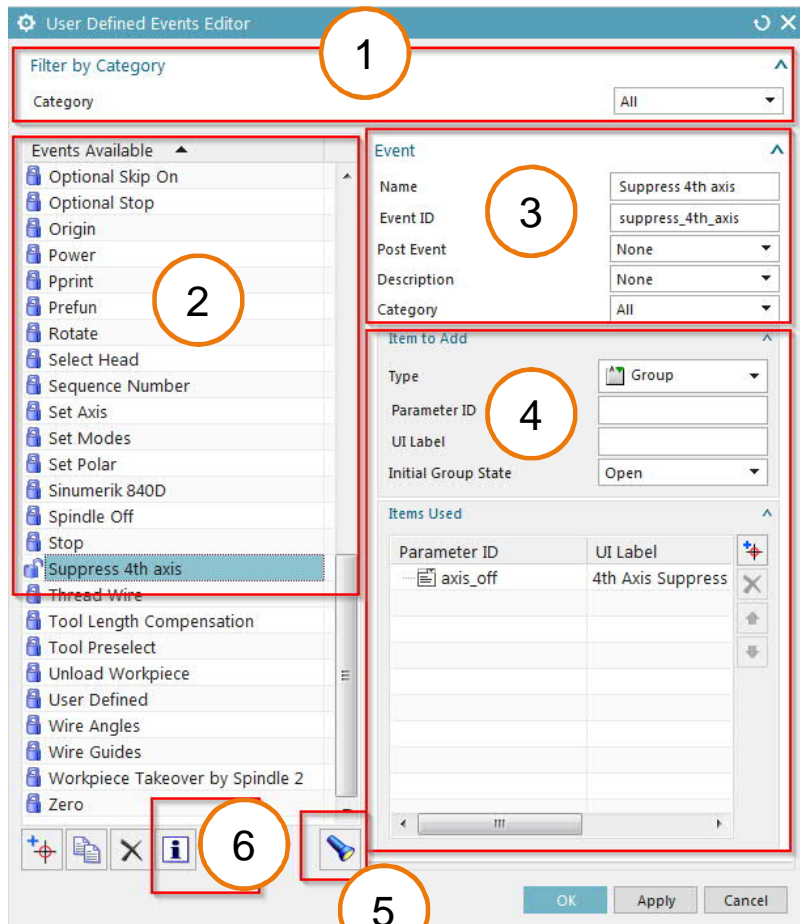

- Easy and **integrated editor for User Defined Events**
- Saves time extending the post processor events.

**SIEMENS**  
*Ingenuity for life*

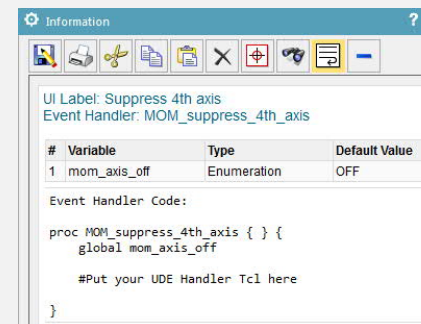

# Top Feature: Editor for UDE files

## Overview Details

1. Filter UDE's by category
2. List of available UDE's from layers
3. General settings for created/ modified UDE such as category
4. Add/ modify/ remove UDE items such as double, integer, bitmap, options, groups
5. Preview of UDE
6. Information listing of UDE with auto generated Event handler code

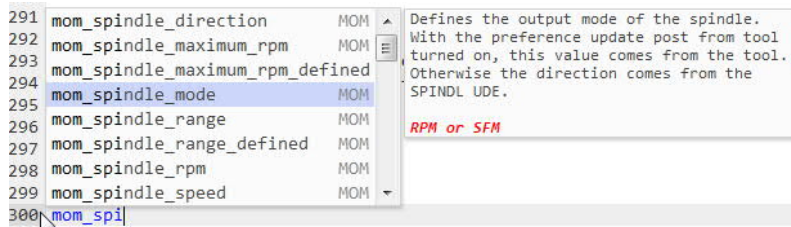

# Top Feature: Tcl editor Overview

**SIEMENS**  
*Ingenuity for life*

## Capabilities

- Integrated Tcl editor with syntax checking
- Snippet and Auto complete functionality
- Search for Tcl code/ highlight all matched items (CTRL+F)
- Can be extended with new snippets
- Integrated help and documentation for commands/ variables

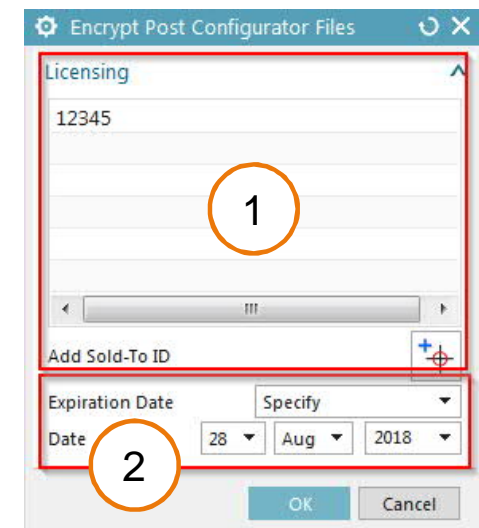

# Top Feature: Encryption Overview

## Capabilities

- Encrypt files to sold to ID, only this user(s) is allowed to execute the post (1)
- Encrypt files to an expiration date, e.g. for Demo purposes (2)
- Encrypt files to an ID and expiration date
- All Tcl files will be encrypted which are sourced into current postprocessor

# Top Feature: Multichain support Overview

## Capabilities

- Easily setup a post processor for multi-channel and – function machines through integrated NX user interface
- Chains & channels defined in the machine kinematic will automatically be reused
- Right settings will be used based on the active chain of the machine
- This functionality can be customized and used through the Tcl/MOM interface
- Even for simple MillTurn machine tools only UI properties are needed (Tcl is needed with increase of complexity)
- **Note:** This is now a production ready Feature with NX12.0.2

# Top Feature: Inspect Tool Overview

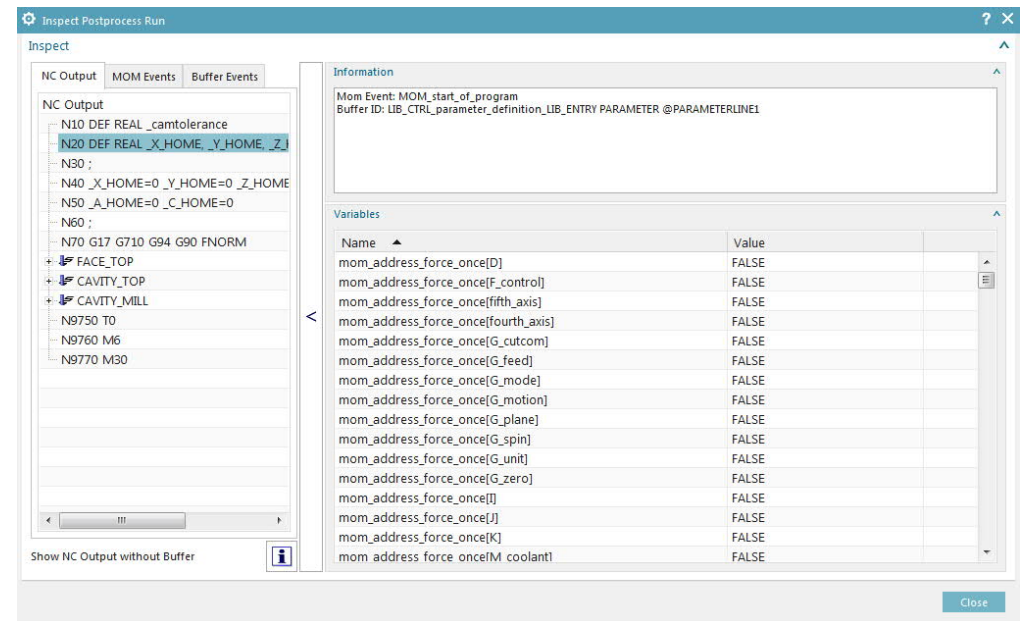

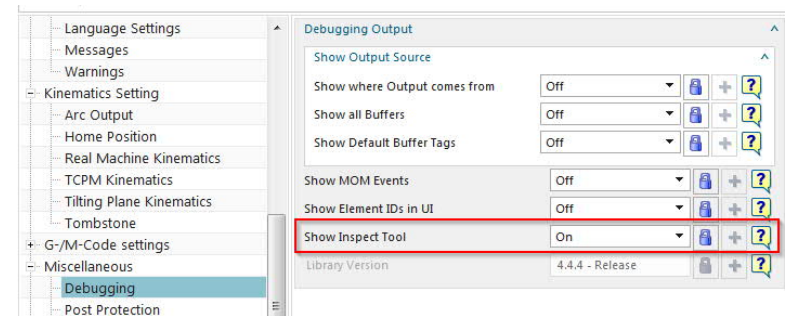

## Capabilities

- Integrated debugging and inspect tool to understand the post processing run
- Listing of all relevant information, such as MOM events and variables and corresponding NC line
- Very fast loading times compared to old review tool
- Preview: Buffer Events for easy modifications in Buffers  
(set UGII\_CAM\_POST\_CONFIGURATOR\_INSPECT\_TOOL\_PREVIEW=1)

## Customer Benefits

- Easy way to inspect and understand the data used by the post processor
- Make modifications on the post processor faster

# Top Feature: Layer Manager Overview

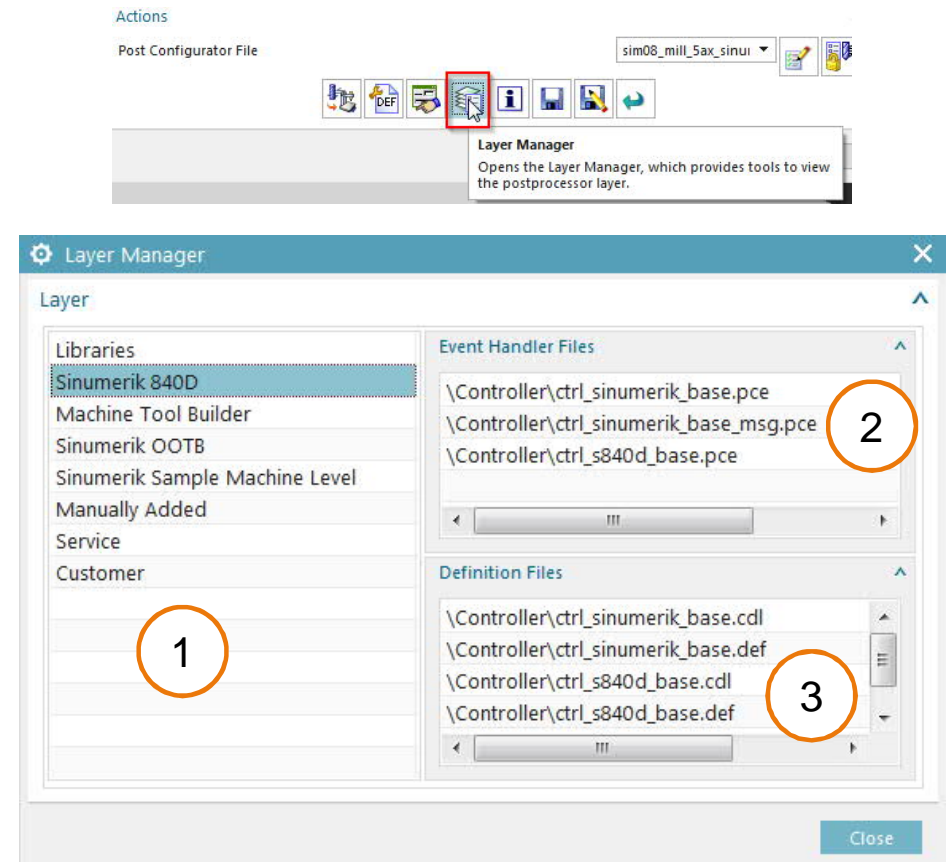

## Capabilities

- List all available post processor layers
- Show all related Event Handler files
- Show all related Definition files, for User Defined Events and Formatting

## Customer Benefit

- Graphical user interface to **understand layer structure** of a post processor faster
